There are 8 665 children in the train and 3 600 in test.

In this competition, we aim to use machine learning techniques to identify factors of early learning programmes that contribute to better learning outcomes in children. While predicting the child's ELOM score and the top 15 predictors for each child.

The final merged dataset consisted of 12 265 children across 2 217 facilities. Table X below provides a summary of the data include in the meta-dataset. The first column indicates the data source, and the remainder of the columns show the different types of tools data collected and the number of children we have data for across these sets of variables. An "X" indicates that the data was not collected at all.

	Type of data collected							
Source	Number of children assessed	Fee level information	Socio-emotional functioning	LPQ	HLE	Height for age	Practitioner or principal interview data	Environmental Observation
TOTAL	12 265	**8104**	**10316**	**2332**	**275**	**9918**	**7356**	**7162**

Notes: LPQ = The Learning Programme Quality; HLE = Home Learning environment Tool. *Practitioner or principal interview data varies across the dataset. Environmental observations largely relate to access to facilities at the programme (i.e. tap, running water, electricity).*

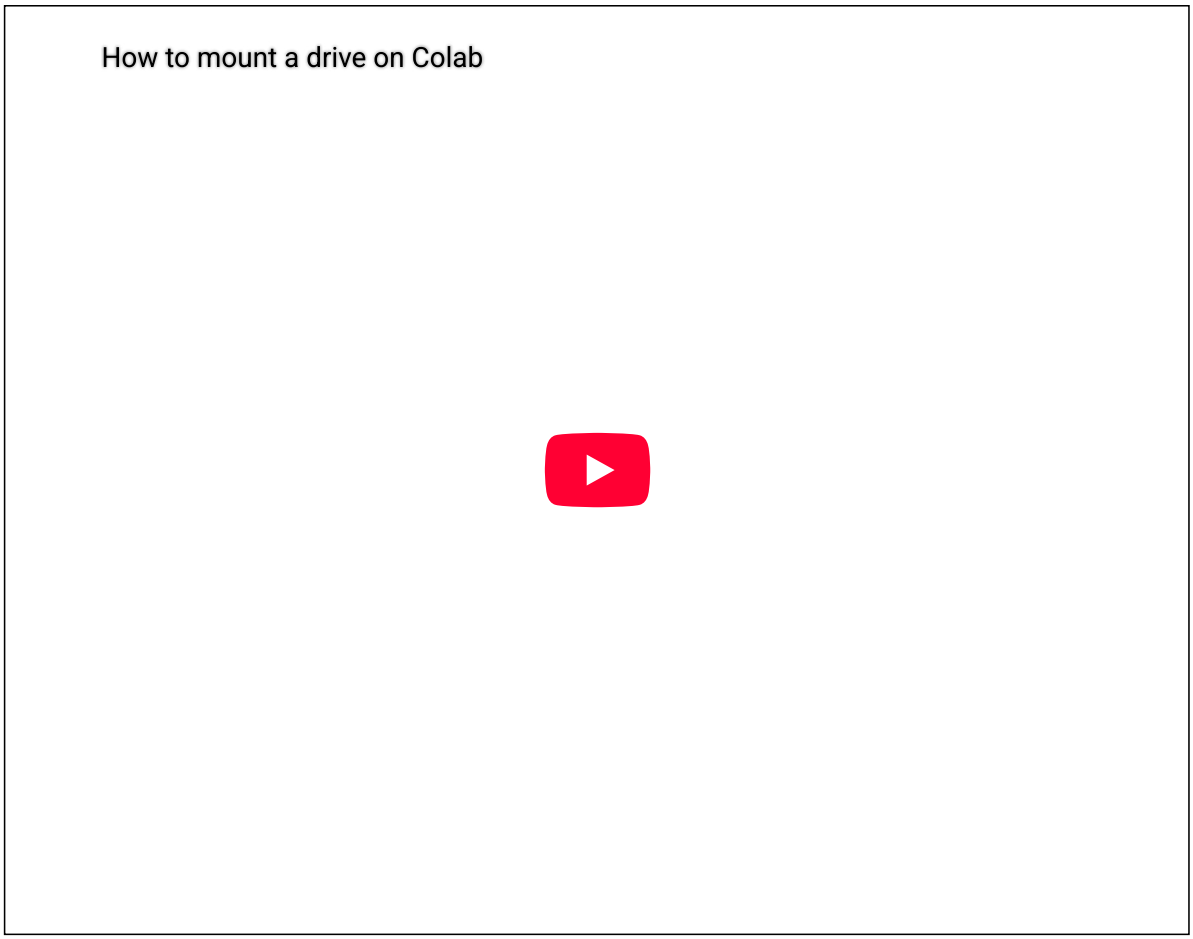
How to mount a drive on Colab



Files

DESCRIPTION	FILES
Definitions of the variables in test and train.	VariableDescription.csv 48.2 KB
Is an example of what your submission file should look like. The order of the rows does not matter, but the names of the child_id must be correct.	SampleSubmission.csv 485.3 KB

Train contains the target. This is the dataset that you will use to train your model.	Train.csv 21.6 MB	
Test resembles Train.csv but without the target-related columns. This is the dataset on which you will apply your model to.	Test.csv 9.2 MB	
Information on how the data was collected.	Data_sources_and_collection.pdf 85 KB	
This is a starter notebook to help you make your first submission. If the file open weirdly you can ctrl-S and it will save to your download folder.	ECD_StarterNotebook.ipynb 118.3 KB
